## INSTALLATION

- **Euclidean Circles** is a **10 hp** Eurorack module
- the module only needs **5V** to operate, it does not use +12V/-12V at all. If your rack does not have a 5V supply you will need to add that before using it
- carefully check the **orientation** of the 16-pin power connector, the **red stripe** should be at the bottom of the module, see the labeling on the PCB. There is a protection diode so plugging it in the wrong way should not do harm.
- depending on the LED brightness setting, the modules consumes between **60mA** and **300mA** from the 5V supply

## BASIC OPERATION on CHANNELS 1-3

- connect a clock signal to the clock input labeled **CLK**
- press buttons **#1**, **#2** or **#3** to switch between states:
  - **BLUE** control the length of the sequence on circle **1-3**
  - **ORANGE** control the fill of the sequence on circle **1-3**
  - **PURPLE** control the start point of the sequence on circle **1-3**
- channels **1-3** output a signal for every fill position of the sequence
- channels **4-6** output the off-beats of channels **1-3**
- a rising edge signal on the **RST** input will reset all channels to step 1 on the next clock signal
- if you wonder what this is all about:  
[https://en.wikipedia.org/wiki/Euclidean\\_rhythm](https://en.wikipedia.org/wiki/Euclidean_rhythm)

## 6-CHANNEL MODE

- in **6-CHANNEL** mode (see **PRESETS** and **SETTINGS** below) long press **button #1** to switch between controlling channels **1-3** and **4-6**:
  - **CYAN** control the length of the sequence on channel **4-6**
  - **ORANGE** control the fill of the sequence channel **4-6**
  - **PURPLE** control the start point of the sequence on channel **4-6**

# EUCLIDEAN CIRCLES by av500 – User Manual rev1.0

## AUTO CLOCK

- long press **button #2** to enter **AUTO CLOCK** mode
- rotate **button #2** clockwise to increase internal clock speed, the range is between 10 and 2500 bpm
- rotate **button #2** fully counterclockwise to stop internal clock
- press **button #2** to exit **AUTO CLOCK** mode

## PRESETS and SETTINGS

- long press **button #3** to enter **PRESETS and SETTINGS** mode
- one preset always loads and saves the length, fill and start values for all channels
- **button #1** selects and stores presets:
  - current preset is shown with a **green LED**
  - **load preset:** rotate button **#1** to select preset **1-16** and press it shortly to **load** the preset
  - **save preset:** rotate button **#1** to select preset **1-16** and **long press** it until the circle turns all green to **save** the preset
  - loading or saving a preset will cancel the **PRESETS and SETTINGS** mode and return to basic operation
- **button #2** turns settings on and off:
  1. **6-CHANNEL** - when **off**, channels 4-6 output the offbeats of channels 1-3, when **on** there are 6 independent channels in total
  2. **TOGGLE** - output signal toggles at each pulse instead of following the input clock
  3. **PRESCALE 12** - channel #2 advances by each step set on channel #1
  4. **PRESCALE 123** - channel #2 advances by each set step of channel #1 and channel #3 advances by each set step of channel #2
  5. **CHAIN 12** - channel #1 is played once followed by channel #2; the combined sequence is output on channel #1
  6. **CHAIN 123** - channel #1 is played once followed by channel#2 and then channel #3; the combined sequence is output on channel #1

## EUCLIDEAN CIRCLES by av500 – User Manual rev1.0

7. **FIXED PULSE 1** - fixed output pulse width for channel **#1**
  8. **FIXED PULSE 2** - fixed output pulse width for channel **#2**
  9. **FIXED PULSE 3** - fixed output pulse width for channel **#3**
  10. **PULSE WIDTH** - off: 10 ms, on 1 ms
  11. **RANDOM 1** - 25% probability of muting a set step on channel **#1**
  12. **RANDOM 2** - 25% probability of muting a set step on channel **#2**
  13. **RANDOM 3** - 25% probability of muting a set step on channel **#3**
  14. **SPARSE** - only the currently **active** steps are shown by the LED circles
  15. **SPREAD** - the active steps per circle are always spread circularly around the button
  16. **RESET** - manually resets all channels to the first step on the next external or internal clock signal
- **RESET ALL:** press and hold button **#2** on setting **16** for at least **5** seconds to erase all presets and settings, **use with caution**
  - **rotate button #3** to control the **brightness** of the LEDs in 8 steps
  - **SETTINGS** and **brightness** are saved whenever one of the **PRESETS** is saved
  - press **button #3** to exit **PRESETS and SETTINGS** mode

### SAFE MODE:

- to enable **SAFE MODE**, press and hold all three buttons while powering up the unit, after ~1s all circles will turn **RED** and safe mode is permanently enabled
- with **SAFE MODE** enabled, the third circle will show all **RED** at power up
- in **SAFE MODE** all settings are disabled, there is no **AUTO CLOCK** and the **brightness** is at level 1. The pattern at startup is whatever pattern was saved as preset 1 when **SAFE MODE** was enabled
- to disable **SAFE MODE**, press and hold all three buttons while powering up the unit, after ~1s all circles will turn **GREEN** and safe mode is permanently disabled

Enjoy!
