Clock Generator/Processor

# Spread Control

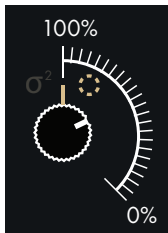

The Spread control determines the range of clock multiplications and divisions. Reduction of Spread will align all outputs to the  BPM.

Spread Control

# Probability Control

100% probability  
when at 12 o'clock

## Programming Mode

**Programming Mode** - This mode is used to lock/unlock the settings of individual outputs. Select the output via the **Output Select Knob**. Toggle lock/unlock with the **Tap Tempo Button**.

Unlocked outputs are unlit.  
Selected output is lit white.  
Selected output is lit mixed when locked.  
Locked outputs are lit orange.

**Regular Mode** - Performs with defined locked states.

**Live Mode** - Ignores any locked definitions.

**Note:** When outside **Programming Mode** press and hold **Tap Tempo Button** to save state between power cycles.
